

BERGO TILE CARE INSTRUCTIONS

NAVODILA ZA NEGO BERGO PLOŠČ

GB With regular care of your Bergo floor according to the recommendation, you will extend the lifetime, color and lustre of your floor by many years.

Bergo's multifunctional floor tiles are made from the best materials available in the market. They offer the highest possible color stability and UV protection. Therefore our products are likely to last for many years, even with a minimum of maintenance. Taking care of the tiles regularly extends the lifetime and lustre of your floor. Therefore we recommend these care measures:

Cleaning - Indoors - One of the multiple functions of a Bergo floor is that it looks clean and fresh, even if it goes a long time between cleanings. Bergo flooring installed in an indoor environment is cleaned as needed with traditional cleaning equipment such a vacuum and a mop with a *cleaning agent. If you haven't cleaned the floor in a long time, you can uncover the substratum which needs cleaning. Use our disassembly tool to split the floor into smaller sheets. Remove the sheets and clean the substratum with the required cleaning agent and equipment. Next put the floor back in its original location.

Cleaning - Outdoors - Dirt particles spread by wind and weather will end up on your Bergo floor as well. To keep your floor clean, we recommend that you regularly mop it with a *cleaning agent and then rinse it with a hose. A highpressure wash appliance is preferable if you have access to one. You decide how often to clean the floor, but we recommend doing so at least once a year. If the flooring is extremely dirty or if it's been a long time since it was cleaned, we recommend using a somewhat stronger detergent combined with a rotating brush used for high-pressure washing, for example.

Large surfaces and/or public spaces - Naturally it is faster to use professional cleaning equipment in public spaces and larger installations where floors become extremely dirty. We suggest that you consult with your cleaning company.

* Cleaning agent - Most cleaning agents can be used to remove dirt. Some are especially suited for composites, and these are recommended. In extremely dry environments such as indoors, the detergent should contain an antistatic agent which minimizes the risk of static electricity. Bergo's products can withstand most chemicals.

SLO Z rednim vzdrževanjem vaših Bergo tal podaljšate življenjsko dobo, barvo in sijaj vaših tal tudi za več let.

Večnamenske plošče Bergo so narejene iz najboljših materialov, ki so na voljo na trgu. Nudijo najvišjo možno barvno stabilnost in UV zaščito. Zato bodo tla Bergo obstojna več let, tudi z minimalnim vzdrževanjem. Redna skrb za talne plošče podaljšuje življenjsko dobo in sijaj vaših tal. Zato vam priporočamo naslednje ukrepe:

Čiščenje - v notranjih prostorih - ena od več funkcij Bergo tal je, da izgledajo čista in sveža, čeprav je od čiščenja preteklo že kar nekaj časa. Bergo talne obloge, nameščene v notranjem okolju, po potrebi očistimo. S tradicionalno čistilno opremo, kot sta sesalec in vlažna krpa s čistilnim sredstvom*. Če že dolgo niste očistili tal, lahko Bergo plošče odstranite in očistite podlago, katera potrebuje čiščenje. Uporabite orodje za demontažo, da tla razdelite na manjše dele. Odstranite plošče in očistite s čistilnim sredstvom. Tla spojimo nazaj skupaj na prvotno lokacijo.

Čiščenje - v zunanjih prostorih - delci umazanije, ki se širijo preko vetra, bodo končali tudi na vaših Bergo tleh. Če želite, da so tla čista, priporočamo, da ga redno čistite s čistilnim sredstvom* in ga sperete s curkom vode. Naprava visokotlačnega pritiska je priporočljiva. Odločite se, kako pogosto boste čistila tla, naše priporočilo je vsaj enkrat letno. Če so tla zelo umazana ali pa je že dolgo, odkar so bila očiščena, priporočamo uporabo nekoliko močnejšega detergenta v kombinaciji z vrtljivo krtačo, ki se uporablja za visokotlačno pranje.

Velike površine in/ali javni prostori - delo je hitreje upravljeno. S profesionalno opremo za čiščenje v javnih prostorih in večjih institucijah, ker se tla zelo umažejo. Predlagamo, da se posvetujete s svojim čistilnim servisom.

* Sredstvo za čiščenje - večino čistil lahko uporabite za odstranjevanje umazanije. Nekatera so še posebej primerna za PP-kompozite. V izjemno suhih okoljih, kot so na primer zaprti prostori, mora detergent vsebovati antistatično sredstvo, ki zmanjšuje statično elektriko. Bergo tla lahko prenesejo večino kemikalij.
